DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-6, 8, 17, 19, drawn to a test machine with chuck, holder, actuator and load sensor, classified in class 73, subclass 9.
- II. Claims 9-16, drawn to a test machine with chuck, holder, actuator and wear sensor, classified in class 73, subclass 7.

Claims 7 and 18 are considered to be linking claims and will be examined with the elected invention.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed which appears to be a friction tester does not require the particulars of the subcombination as claimed because combination does not require a wear sensor. The subcombination has separate utility such as an abrasion tester.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
